

The 2009 Import and Export Market for Electric Plugs and Sockets for Voltages of Up to 1,000 Volts in Canada

The 2009 Import and Export Market for Electric Plugs and Sockets for Voltages of Up to 1,000 Volts in Canada

By
Professor Philip M. Parker, Ph.D.
Chaired Professor of Management Science
INSEAD (Singapore and Fontainebleau, France)

On the demand side, exporters and strategic planners focusing on electric plugs and sockets for voltages of up to 1,000 volts in Canada face a number of questions. Which countries are supplying electric plugs and sockets for voltages of up to 1,000 volts to Canada? How important is Canada compared to others in terms of the entire global and regional market? How much do the imports of electric plugs and sockets for voltages of up to 1,000 volts vary from one country of origin to another in Canada? On the supply side, Canada also exports electric plugs and sockets for voltages of up to 1,000 volts. Which countries receive the most exports from Canada? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for electric plugs and sockets for voltages of up to 1,000 volts in Canada. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for electric plugs and sockets for voltages of up to 1,000 volts for those countries serving Canada via exports, or supplying from Canada via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Canada fits into the world market for imported and exported electric plugs and sockets for voltages of up to 1,000 volts. The total level of imports and exports on a worldwide basis, and those for Canada in particular, is estimated using a model which aggregates across over 150 key

country markets and projects these to the current year. From
