

The 2011 Import and Export Market for Liquid Dielectric Transformers in Sweden

On the demand side, exporters and strategic planners focusing on liquid dielectric transformers in Sweden face a number of questions. Which countries are supplying liquid dielectric transformers to Sweden? How important is Sweden compared to others in terms of the entire global and regional market? How much do the imports of liquid dielectric transformers vary from one country of origin to another in Sweden? On the supply side, Sweden also exports liquid dielectric transformers. Which countries receive the most exports from Sweden? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for liquid dielectric transformers in Sweden. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for liquid dielectric transformers for those countries serving Sweden via exports, or supplying from Sweden via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Sweden fits into the world market for imported and exported liquid dielectric transformers. The total level of imports and exports on a worldwide basis, and those for Sweden in particular, is estimated using a model which aggregates across over 150 key country markets and projects these to the current year. From there, each country represents a percent of the world market. This market is served from a number of competitive countries of origin. Based on

both demand- and supply-side dynamics,
market shares by country of
