

# The 2011 Import and Export Market for Public Transportation Motor Vehicles with a Capacity of At Least 10 Persons in Italy

On the demand side, exporters and strategic planners focusing on public transportation motor vehicles with a capacity of at least 10 persons in Italy face a number of questions. Which countries are supplying public transportation motor vehicles with a capacity of at least 10 persons to Italy? How important is Italy compared to others in terms of the entire global and regional market? How much do the imports of public transportation motor vehicles with a capacity of at least 10 persons vary from one country of origin to another in Italy? On the supply side, Italy also exports public transportation motor vehicles with a capacity of at least 10 persons. Which countries receive the most exports from Italy? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for public transportation motor vehicles with a capacity of at least 10 persons in Italy. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for public transportation motor vehicles with a capacity of at least 10 persons for those countries serving Italy via exports, or supplying from Italy via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Italy fits into the world market for imported and exported public transportation motor vehicles with a capacity of at least 10 persons. The total level of imports and exports on a worldwide basis, and those for Italy in

particular, is estimated using a model which
