

The 2009 Import and Export Market for Gas Generators, Distilling or Rectifying Plant, Heat Exchange Units, and Machinery for Liquefying Air or Other Gases in South Korea

On the demand side, exporters and strategic planners focusing on gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases in South Korea face a number of questions. Which countries are supplying gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases to South Korea? How important is South Korea compared to others in terms of the entire global and regional market? How much do the imports of gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases vary from one country of origin to another in South Korea? On the supply side, South Korea also exports gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases. Which countries receive the most exports from South Korea? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases in South Korea. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for gas generators, distilling or rectifying plant, heat exchange units, and machinery for liquefying air or other gases for those countries serving South Korea via exports, or supplying from South Korea via imports. It does so for the current year based on a variety of key historical indicators and econometric

models. In what follows,
