

The 2011 Import and Export Market for Self-Propelled, Electric Trucks Fitted with Lifting or Handling Equipment in Japan

On the demand side, exporters and strategic planners focusing on self-propelled, electric trucks fitted with lifting or handling equipment in Japan face a number of questions. Which countries are supplying self-propelled, electric trucks fitted with lifting or handling equipment to Japan? How important is Japan compared to others in terms of the entire global and regional market? How much do the imports of self-propelled, electric trucks fitted with lifting or handling equipment vary from one country of origin to another in Japan? On the supply side, Japan also exports self-propelled, electric trucks fitted with lifting or handling equipment. Which countries receive the most exports from Japan? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for self-propelled, electric trucks fitted with lifting or handling equipment in Japan. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for self-propelled, electric trucks fitted with lifting or handling equipment for those countries serving Japan via exports, or supplying from Japan via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Japan fits into the world market for imported and exported self-propelled, electric trucks fitted with lifting or handling equipment. The total level of imports and exports on a worldwide basis, and those for Japan in

particular, is estimated using a model which aggregates across
