

# The 2011 Import and Export Market for Vacuum Pumps in the Netherlands

On the demand side, exporters and strategic planners focusing on vacuum pumps in the Netherlands face a number of questions. Which countries are supplying vacuum pumps to the Netherlands? How important is the Netherlands compared to others in terms of the entire global and regional market? How much do the imports of vacuum pumps vary from one country of origin to another in the Netherlands? On the supply side, the Netherlands also exports vacuum pumps. Which countries receive the most exports from the Netherlands? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for vacuum pumps in the Netherlands. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for vacuum pumps for those countries serving the Netherlands via exports, or supplying from the Netherlands via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where the Netherlands fits into the world market for imported and exported vacuum pumps. The total level of imports and exports on a worldwide basis, and those for the Netherlands in particular, is estimated using a model which aggregates across over 150 key country markets and projects these to the current year. From there, each country represents a percent of the world market. This market is served from a number of competitive countries of origin. Based on both demand-

and supply-side dynamics, market shares by country of origin are then calculated
